

Small Entrepreneurs & Establishments

require a communication system that offers

all the basic functionalities of an Intercom,

coupled with some high-end features of an

EPABX, at a price that fits within their tight

budgets. Recognizing this specific need,

Syntel designed a new age mini EPABX - the

Syntel *Plus* - that provides all the required

& essential features inbuilt in the system, at a

price far less than any other equally

competent model in the market. Thus not

only does the *Plus* ensure a true 'value for

money' proposition but also acts as a key

productivity enhancement tool in one's day-

to-day telecommunication process by

offering all the features that one could

possibly need in skin with the basic model!
